

DOOR BUFFER - SOFT

SOFT is the new door buffer Ø 10mm pin, to be placed on the back of the door. This is the result of a special technology combining stiff and tender high-quality materials together, through a double injection. The Ø 10mm pin is stiff with small tender windows all around and empty inside. The outer part is tender with a special round shape. When the door closes, the impact of the door is sensibly absorbed by outer tender bumper that recedes into the empty pin and the compressed air inside of it, expands out the tender windows, thus granting a soft and silent door closure.

Rubber and Engineering plastic

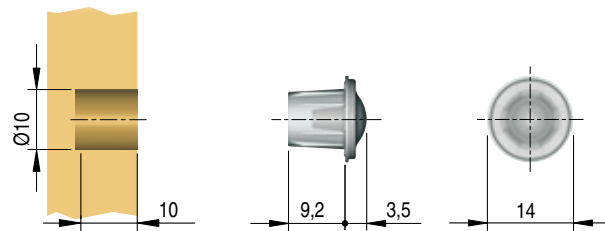

In accordance with the regulation UNI 8607/05 Level 5.
